

## Residential Solution

The Olivia Greetings solution is the most customizable personal entry system for use by residential apartment and condominium buildings.

### OVERVIEW

For residential apartment and condominium buildings, a doorman is a perk that many residents are happy to pay for. A doorman provides extra security, can accept your packages, and is generally available in buildings at the higher end of the market due to the burdensome cost. The Olivia Greetings avatar-based residential solution provides doorman services for a fraction of the cost. For those apartment buildings that cannot do away with their current doorman, the system is a wonderful, 24 x 7 complement that allows more freedom for your doorman without sacrificing service.

### FEATURES

The Olivia Greetings system will perform all the following and more:

- Meet and greet your visitors
- Unlock the door to allow the visitor access to the building
- Keep a digital video record of guests
- Allow residents to manage their visitors and package delivery from a sleek portal
- Display customizable building information

### CASE STUDY

A residential condominium building uses the Olivia Greetings system to meet and greet guests arriving to visit someone who resides in the building. Olivia Greetings is available 24 x 7, so it is able to handle visitors and deliveries that arrive early in the morning or late at night. Furthermore, as doormen typically perform multiple job functions that take them away from the main entrance, the Olivia Greetings system, at a minimum, acts as an excellent supplemental solution. Of course, the interactions are recorded which provides yet another element of security for the building resident. Finally, the residents are able to update requests and instructions through their own secure portal which gives them control over their individual processes.

### CONTACT

**About Olivia Greetings:** Olivia Greetings is the world's first avatar-based virtual greeting and assistant system. The complete Olivia Greetings system is managed via a secure, web-based portal and consists of a touch screen panel, customizable features, telephone answering services and access control and is used in a wide variety of industries.
